Taking delivery of your Morso:

A boxed Morso F weighs 100kg and other models even more, so you'll need to make some plans for how you'll take delivery of it. Delivery is to kerbside only unless otherwise agreed in advance.

Read more on our website, which also gives some tips on de-greasing and setting up a new machine.

A foot-operated mitring machine

MORSØ-F cuts double mitre at 45° and single mitre up to 90°. Tenon, mortise joints and a wide variety of angled cuts can also be made.

Because the MORSØ-F works with knives (non-rotating) the working procedure creates no dust. The cutting waste is lead from the machine via the waste chute. As the MORSØ-F is foot-operated there is no need for a compressor or electricity, which means the MORSØ-F can be operated literally anywhere.

MORSØ-F leaves the cut surface of the wood perfectly smooth and accurate, requiring no further preparation before joining. The horizontal movement of the knife block is step by step adjustable. The vertical movement of the knife block is also adjustable.

The special lever system of the machine ensures a very easy operation. The sliding longitudinal stop and measuring scale ensure accurate repeat work, and twin return springs automatically bring the knives back to starting position.

The MORSØ-F is delivered with: Safety guard, waste chute, sliding longitudinal stop, 1500 mm measuring scale, adjustable fences (45-90°) and adjustable rebate supports.

As accessory: Automatic Rebate Support System **2858**

Left-hand Support Table **1007**

Rebate Depth Extenders **6143**
