

## Sockets for Square Wire Frame Stands

The unique feature of both types of socket is that the stand is inserted during frame production to lay flat against the back, for easy packing.

Users simply lift it out, turn and re-insert for the frame to stand.

### Clip-on Sockets for Frame Stands

Fit boards 1.8 - 3.0mm. Only one normally required per frame, as users can easily move it to suit.

### Press-fix Sockets for Frame Stands

These are applied to the backing board using a Alfa SH200 Manual Press 9554, fitted with socket locator set 9952. Two are normally fitted to allow a frame to stand either way.

## Square Wire Frame Stands for photo frames and panels

The simple system uses Sockets which clip-on or press-fix to frame backs and panels.

A range of three sizes of Square Wire Frame Stands slip into the Sockets. They lay flat for packing and users lift them out, turn and re-insert to make the frame stand up. Choose improved Black, Brass or Nickel finishes.

## Square Wire Frame Stands

Elegantly shaped in rigid steel, they fit into either of the sockets.

When assembling the frame they are inserted to lay flat against the back. Users slide them out, turn and re-insert them to make the frame stand up.

Frame Stands come in three sizes and frame makers should try different sizes to see which one best suits a particular frame size and moulding makes it stand at the optimum angle. Large and Gallery stands are of similar sizes but shaped differently. The Gallery stand is better on wider mouldings.

Square Wire Frame Stands are available in Black, Brass and Silver finishes, in packs of 20, 100 and 500.

Square Wire  
Stands range

These Stands have an improved Black finish

### Square Wire Frame Stands – Small 82mm
